HANSALIGNA

**Perfect reflection of a strong character:  
HANSALIGNA.**

# Worth much more than just a glance: HANSALIGNA.

With its distinctive and strict geometrical shapes, yet creating a smooth and flowing effect, HANSALIGNA immediately catches the eye. And also on second glance, the new fitting series reveals amazing features. For HANSALIGNA offers sophisticated, timeless and modern design at a price level just as attractive as its looks.

As all series within the **HANSA|LIVING** segment, HANSALIGNA allows the implementation of a variety of bathroom concepts and ideas with its own complete range of products.

The internal Hansa technology is advanced, field proven many times over and state-of-the-art. Designed for comfort, safety and sustainability, it ensures optimum functionality, helps to save resources and makes the pleasure of using HANSALIGNA an enjoyable and long-lasting experience.

Apart from the classic basin mixer, we also offer an elegant high version for free-standing washbasins. An integrated stream former reduces the water flow for all versions to approximately 7 l/min.

A charming counterpart to the high basin mixer is an XS version – ideal for the guest bathroom or toilet. The product line is complimented by the matching bidet fitting.

## Strong on its own; convincing in a team: HANSALIGNA on the bath.

Big appearance for HANSALIGNA. Its consequent and distinctive design has also been applied to the bath. Depending on the spatial circumstances, design concept or individual preferences, you can choose between a modern exposed fitting or a subtle and sophisticated concealed solution, where the technology is concealed behind the wall.

No matter which version you decide on: With its harmonious shapes HANSALIGNA fits perfectly in any surrounding. Especially the softly curved shape transitions not only please the eye but offer a distinctive practical advantage: This makes HANSALIGNA very easy to clean.

One of the several possible solutions for the bath is the exposed solution; here combined with the flat HANSAPUREJET hand shower (left).

The diverter for the bath spout and the hand shower is integrated in the shower outlet and is easy to use by simply pulling the hose. This enhances the looks and facilitates cleaning of the fitting.

The concealed solution with wall connection elbow and HANSAPUREJET hand shower has a subtle and sophisticated look. In addition, the HANSALIGNA bath spout or the HANSAFILL bath inlet and outlet set can be installed. The concealed standard HANSAVAROX offers any design option you may require.

## Diversity and distinction from the same line: HANSALIGNA in the shower.

HANSALIGNA impresses with its very individual combination of plane surfaces, very slim bodies and flawless surface finishes – also in the shower. Being both diverse and flexible, HANSALIGNA is also an ideal combination partner: For example, the accessories from the HANSADESIGNO line, the design-oriented, exposed HANSATEMPRA STYLE thermostat, the single or dual-jet HANSAPUREJET hand showers and the HANSAJET shower system are the perfect complement to any shower solutions.

There are numerous possibilities! Apart from the "classic" versions, an equally elegant and convenient concealed solution with thermostat can be implemented – for example, in spacious shower rooms with high aesthetic standards.

Exactly as required: For example, a exposed solution with short shower rail (left) or a screwless concealed solution with long shower rail (right).

Convenient and beautiful: a HANSALIGNA exposed fitting for shower systems, here in combination with a HANSAJET shower system (large picture on the right).
