**Emotion and intelligence in  
perfect harmony:  
HANSARONDA.**

# Rediscover a familiar favourite.

## HANSARONDA.

Harmony: No other series of fittings embodies this principle so credibly as the new HANSARONDA. The carefully yet thoroughly overhauled design ensures that the popular fittings of the design-oriented HANSA|LIVING segment appear young and fresh.

The harmonised range is also extremely modern and practical. The various HANSARONDA options for basin, bathtub and shower allow the realisation of numerous ideas and sophisticated, architecturally-related concepts when planning a bathroom.

The principle of sustainability has always been echoed in our products and production processes. We attach great importance to resource-friendly production procedures and durable, environmentally-friendly product concepts. Our fittings are quiet, easy to maintain, ensure water quality and guarantee maximum hygiene. For example, HANSARONDA requires just 6 litres of water per minute - half the amount of a conventional mixer.

Green responsibility is a guarantor of cutting-edge, ecological and intelligent Hansa technology.

For explanation of the symbols, see page 11

The new HANSARONDA is impressive due to an attractive combination of purposeful and soft, linear and elliptical shapes (fig. left). The harmonious proportions are also fully expressed at the high basin (fig. above).

Comfortable, extremely practical and typically HANSARONDA: The special pull-out shower is ideal for washing hair and filling containers.

# Always different. Always unmistakable: HANSARONDA.

Typical for the **HANSA|LIVING**-series is the wide range of products in all the application areas. **HANSARONDA** therefore creates space for creative individuals in an exemplary manner. The basin mixer is usually influential for the design of a range of fittings. Of course, it is all the better if the design features are perfectly transferred to the bath and shower components. The flowing transitions and reduced clearances are not only optically appealing, but also particularly easy to clean. We thus make it easier for you to retain the deep shine of the high-quality surface for many years to come. Whether you choose comfortable

concealed solutions, a free-standing bathtub or a classic exposed fitting: **HANSARONDA** is particularly treasured due to the timeless overall look.

There are almost no limits to the design of the bath area in modern bathrooms. **HANSARONDA** offers a harmonious and effective functional solution for every planning option. For example, the **HANSA** bath and rim-mounted system provides you with almost unlimited arrangement options. Just as you desire (fig. middle).

The reduced and calming shapes are particularly emphasised when only the trim parts are visible and the reliable **HANSA** technology can operate efficiently in the background (fig. left).

Clear looks and easy to clean: The exposed solution in the shower is very impressive due to the concealed connections (fig. top). The concealed version on HANSAVAROX basis is plain yet stylish (fig. right).

## Two perfect accompaniments to HANSARONDA: HANSAMATRIX and HANSAVIVA.

HANSAMATRIX not only provides you with a wide range of products but also plenty of room for individual creativity. With this innovative product system, consisting of single-lever mixers, thermostats and accessories, architecturally-striking plans can be fully realised as a concealed solution.

The components of this system can be combined in a variety of ways with the aid of a classically proportioned grid. Innovative function combinations result in a clearly structured appearance of the fittings.

The new comfort-oriented HANSAVIVA shower range also has a perfectly harmonised design.

Besides the typical HANSA quality, stylish design and extensive functions, the series is mighty impressive due to its outstanding price/performance ratio. The series, ranging from hand showers and overhead showers to wall bars and shower systems, creates the largest possible basis for decision making.

Thanks to the **VARIJET** technology the water is variably distributed to the outlet spray rings.

This creates a full spray pattern in all kinds of sprays:

- (1) activating and energising
- (2) powerful and focussed
- (3) soft and bountiful

The HANSAVIVA hand shower is available with shower head sizes of 100 mm and 130 mm. The ergonomically designed handle is very comfortable and easy to hold; the **THERMO COOL** function prevents the shower housing becoming hot.

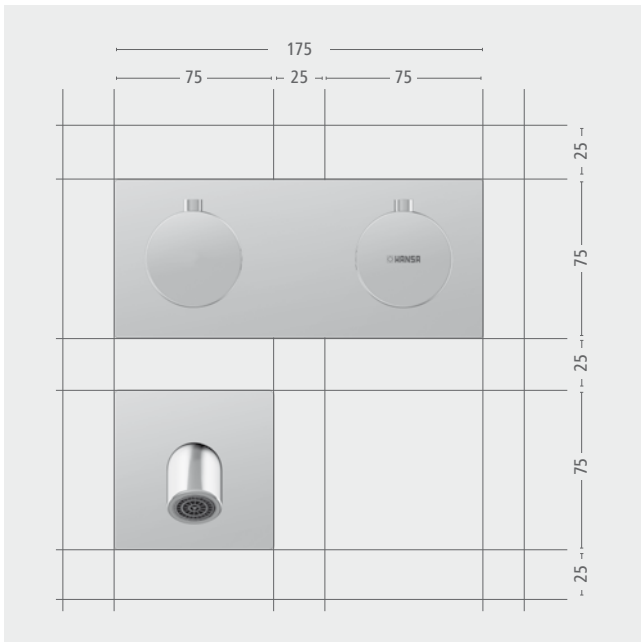

Very practical: The special Twist Guard hose cone has an integrated twist guard.

Stylish details such as the fully chrome-plated soap dish round off the high-quality appearance of the series. An integrated flow limiter reduces water consumption by up to 50%.

Modern and architecturally striking bathroom planning on the basis of HANSAMATRIX ensures the space is used to its maximum potential due to clever proportioning and effective arrangement.

The regular 25 mm grid dimension is the basis for each and every HANSAMATRIX plan, creating the greatest possible creative freedom and offering maximum safety via mounting rails. The two basic shapes of the HANSAMATRIX components are also based on the 25 mm grid.

Excellent product quality is created when every detail is considered important, is well-thought-out, offers noticeable benefits. At least 1 product of the series display the assigned characteristics:

**HANSARONDA**

Flow rate restriction to 6 l/min and intelligent spray formation result in optimized water consumption for full comfort.

Extremely quiet. Fitting complies with the strict conditions under noise protection class 1.

Quick and easy to clean.

More range and functional plus thanks to a single or multi-spray pull-out shower.

**WATER SAFE.** Hi-tech functional core. Preserves water quality.

Our thermostats offer maximum safety with protection against scalding.

The right product for the modular and design-oriented concealed system **HANSAMATRIX**.

**HANSAVIVA**

Flow rate restriction to 12 l/min and intelligent spray formation result in optimized water consumption for full comfort.

Quick and easy to clean.

**THERMO COOL.** Improved safety - the housing of the shower conducts minimal heat.

Twist Guard: Hose cone with an integrated twist protection.

HANSA – always there for you.
