HANSASIGNATUR

THE AESTHETICS OF A NEW INTELLIGENCE

HANSASIGNATUR

What its design promises is fulfilled by its overall conception: **HANSASIGNATUR** opens up new dimensions.

Intelligently styled, multi-functional and sustainably comfortable, the **HANSASIGNATUR** bathroom not only looks futuristic, it sets entirely new standards for the future.

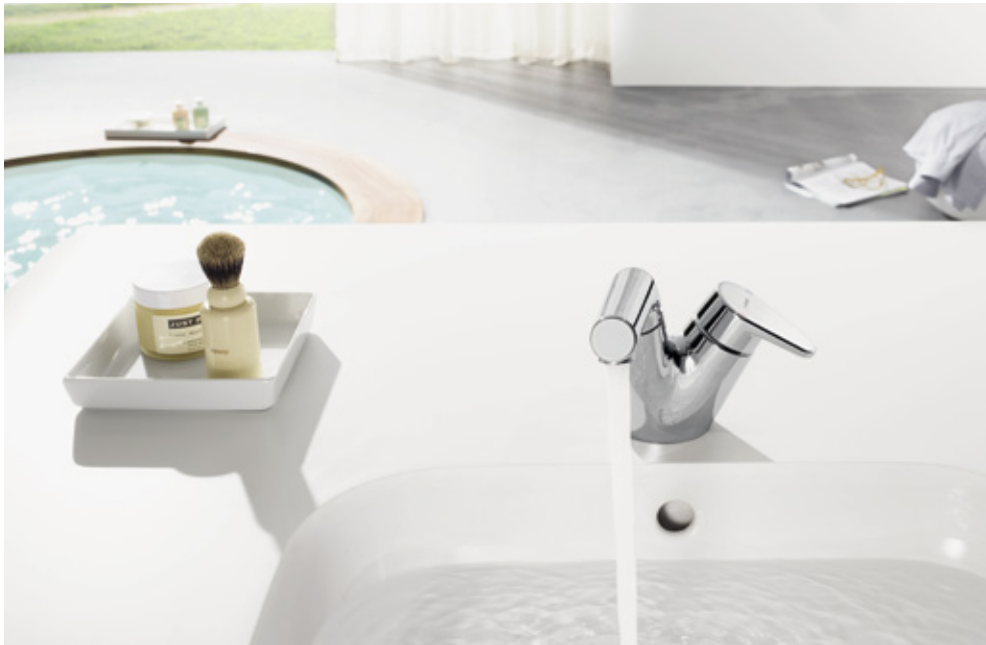

IT CHANGES OUR WAY
OF LOOKING AT THINGS –
AND USING THINGS:
HANSASIGNATUR.

Living entirely in the moment, yet thinking far ahead; celebrating individuality while acting integratively; admiring appearance as well as comprehending the essence: Selecting one option no longer has to mean discarding others. A smart choice nowadays is a multi-dimensional one, marrying together pleasure and good conscience; aesthetics and intelligence – the choice for a generation of fittings adhering to the principle of fusion, not exclusion.

HANSASIGNATUR is the protagonist of that generation: visionary, smart, unique. Never before has a range of fittings been so entirely focused on the needs of progressive-thinking users. The dual structure of the **HANSASIGNATUR** washbasin fitting, with its separate lever and spout layout, is based on strict ergonomic principles and translated into an organometric formal language. The organic fusion of precise geometric shapes creates a look which has never been seen before. With its likewise dualistic, intuitive operator control concept and intelligent applications, **HANSASIGNATUR** is changing our definition of the word “fitting” – and above all the way in which we will use water in the bathroom in future: maximum comfort, controlled, flexible, sustainable.

NEW

There is nothing comparable: **HANSASIGNATUR HYBRID** works manually using the lever or by non-contact sensory operation. Water at the pre-set temperature automatically flows when your hands are detected by the sensors. That is comfortable and hygienic, and saves water and energy.

Functional shower for a significantly enhanced radius of action on the basin. The remote-controlled version, which is operated by a diverter lever on the shower, is the perfect complement to the **HANSASIGNATUR HYBRID**.

THOROUGHLY PRACTICAL FOR EVERYDAY USE. EVERYTHING BUT EVERYDAY.

Multi-functionality is in the DNA of **HANSASIGNATUR**. And the range offers the most comfort options and greatest flexibility where water is used in the widest variety of ways in a bathroom: at the washbasin. The absolute highlight is the innovative hybrid model with integrated pull-out shower, alternatively also available as a single-lever mixer with conventional manual operation (with/without pull-out shower). Both versions offer 150° swivelling outlet. Both basin fittings are also available in combination with matching functional showers.

TURN YOUR FEEL FOR THE SPECIAL INTO REALITY.

It looks different. It is different – fundamentally. What makes **HANSASIGNATUR** unique is its ingenious underlying concept; its innovative structure. The functional separation of the lever and spout in two cones set at right angles to each other, each tilted optimally towards the user, creates a washbasin fitting with a completely new ergonomic quality – and a completely new look. A look based on intelligence and visualising intelligence. As a result, **HANSASIGNATUR** integrates logically into a modern bathroom design, yet is strikingly distinctive: a fascinating multi-function sculpture.

Inner values translated into practicality:

The pull-out shower hose makes **HANSASIGNATUR** even more flexible at the washbasin, and greatly enhances your practical options for using the fitting.

The shower comes as standard with the hybrid model, and is available as an option for the classic lever mixer.

Always different, never the same: **HANSASIGNATUR** opens up a different perspective from every angle. And with every turn of the spout, every setting of the lever, the expressive fitting strikes a new pose.

Purely radical, radically comfort-oriented: The concealed variant of the **HANSASIGNATUR** washbasin fitting is electronically controlled and mains operated. It works without touching. Water flows as soon as you move your hands beneath the sensor built-in to the spout – at precisely the temperature you pre-set on the thermostat.

The water flow rate is limited to an eco-friendly 6 litres per minute.

The rectangular collar, which can be installed upright as shown here or transversely, originates from the **HANSAMATRIX** concealed component system.

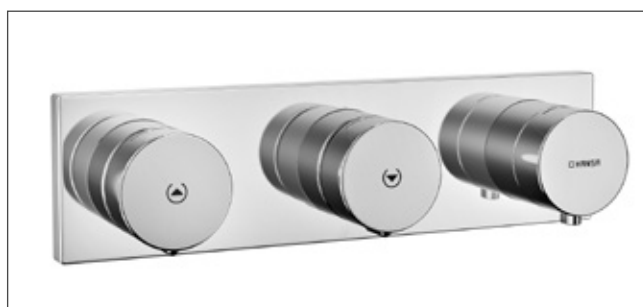

It provides a stylistic link enabling this **HANSASIGNATUR** washbasin variant also to be integrated into bathroom designs featuring other ranges from the **HANSA|LIVING** segment.

FOLLOWING YOUR INTUITION: HANSAMATRIX WITH CONTROL TECHNOLOGY

HANSASIGNATUR is the protagonist of a new generation of fittings. Translating its intelligent concept from the washbasin to all areas of the bathroom, it finds its ideal partner in the latest generation of the HANSAMATRIX concealed component system. Unchanged in structure, logic and layout, HANSAMATRIX for the first time utilises mains-powered intelligent electronics with control technology hidden behind the wall. This provides the basis for a new, intuitive way of controlling bath and shower fittings – and so creates a new sensual yet functional way to use water.

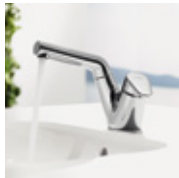

The minimalist, strictly geometric design of the electronically controlled HANSAMATRIX components is compatible with multiple ranges. This makes it possible to combine matching products from the HANSA|LIVING segment, creating significantly more planning freedom.

HANSAMATRIX with control technology completely redefines user comfort. The intuitive control principle is as simple as it is ingenious: Each function has its own Tiptronic control button. Tap the button to activate and deactivate the function or switch functions. Turn the button to regulate the water flow as you wish. The water temperature can be conveniently pre-set on the thermostat.

All shower and bath functions are combined in complete HANSAMATRIX units. There is a functional unit incorporating a thermostat and a Tiptronic button for water on/off (pictured above left) as well as a variant with two Tiptronic buttons – either for two showers (head/hand shower) or for the shower and bathtub (pictured above right).

The reliable electronics of the controls of HANSAMATRIX operating in the background not only ensures perfect comfort. It also helps to make efficient use of resources and save water, by providing you with a visual indicator. Pressing the Tiptronic button switches the tap on for eight minutes, though you can switch it off again at any time by pressing the button again. A white light indicates that the fitting is active and water is flowing. If switched off within four minutes, a green light ring flashes three times to signal the most eco-friendly showering time. After eight minutes the water flow stops automatically.
